

Renovation Kit Measurements Required

Measurements are needed for this product. Please measure your horse carefully using the guide below - either in inches or millimetres and enter your measurements in the boxes provided. Important note if you are unable to supply measurements now we will still take your order but before processing it will contact you for the required information.

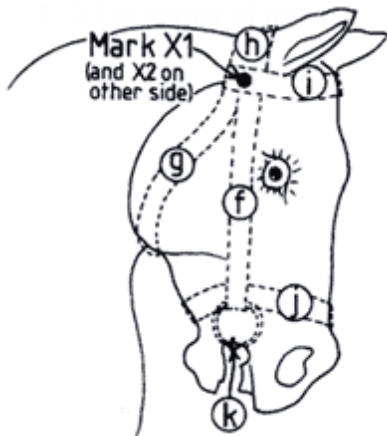

Body Measurements

- A** Length of body measured straight along the side. (This measurement indicates the size of the horse; we need measurement (a) even if you are only ordering a bridle.)
- B** Are there metal staples fixed into the side of the horse from which to hang the stirrup leathers? If YES, how far apart are they? (If NO, we shall supply an alternative for hanging stirrup leathers.)
- C** Length of saddle top.
- D** Measurement across saddle block from side to side. (Leave out if your horse has no saddle block.)
- E** Girth, measured right round horse's belly.

Head Measurements

Pencil a mark at each side of the horse's head, slightly below and behind the base of the ears, as shown in the drawing. Call these marks X1 and X2 and carefully measure as follows:

- G** X1 to X2, measured under the throat.
- H** X1 to X2, measured over the top of the neck.
- I** X1 to X2, measured round the front of the head.
- J** Right round the nose, just above the nostrils.
- K** Width of mouth from side to side (for the bit). (The buckle-on bridles we usually supply are like small versions of real ones & and there is a fair amount of adjustment on the buckled straps.)
